-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Objections*

1. Claims 2 and 12 are objected to because of the following informalities: the phrase "...a return device connected to said sensing..." should be *a return device is connected to said sensing*. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2, 4, 11 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Molzahn (4,281,737).

Molzahn teaches a vehicle comprising a service brake for slowing and stopping the rotation of ground-supporting wheels; a forward/neutral/reverse lever 37 connected to and controlling the hydrostatic pump; a sensing device for sensing that the service brake has been actuated; a control device connected to the control servo of the hydrostatic pump, the control device capable of actuating the control servo from a first position corresponding to either a forward or reverse movement position of the forward/neutral/reverse lever as determined by an operator to a second position corresponding to the neutral position of the forward/neutral/reverse lever; and a signal transfer device interconnecting the sensing device and the control device. A return

Art Unit: 3616

device and/or spring is connected to the sensing device and the control device to return the control servo to the first position when the service brake is no longer actuated.

### ***Claim Objections***

4. Claims 3, 5-8, and 13-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The Notice of References Cited list references disclosing some features in common with the present invention.
